

## Inspirational quote generator

For this assignment, I will be creating a website that allows you to create an inspiring quote at the push of the button on-screen. It will be only for inspirational quotes, and nothing else.

The features will be

- Clean, concise UI.
- Quotes will be stored in an array
- At the press of the button on the website, the current quote will be deleted, and the next will be generated in place of it
- Website being limited to only quotes, to avoid bloatedness

The technical tasks for the features listed will be

- Good use of HTML Semantics
- Using javascript to store the quotes in an array
- Another use of javascript, maybe even like the one in the “text message” assignment
- Staying focused on the scope of the project
